Peer Review Report: Smart-Activity-Reminder Project

Project Overview: The "Smart-Activity-Reminder" is a tool designed to help users stay active by reminding them to move after long periods of inactivity. The goal is to encourage a healthier lifestyle by sending reminders to be physically active during times when they are sitting or inactive for too long.

Strengths:

- **Clarity:** The report is clear and easy to understand, making it simple to know what the project is about and how to use it.

- **Setup Instructions:** The setup guide is well-organized, with easy-to-follow steps for installing and setting up the app.

- **Customization:** Users can personalize the reminder intervals, making the app useful for a variety of different needs.

Areas for Improvement:

- **Detail on Features:** Adding more detailed descriptions of the features, including examples of how they can be used, would be helpful.

- **Technical Depth:** While the setup instructions are good, more detailed explanations of the technology used, possible limitations, and future plans would make the project stronger.

- **User Interface:** Adding visual aids like screenshots of the user interface would help users understand how the app works and looks, instead of using Adafruit dashboard.
